Portfolio Website Generator Prompt

```
You are a senior full-stack web developer and UI/UX designer specializing in clean, recruiter-ready portfolio websites.

## YOUR TASK
Generate a **complete, production-ready personal cybersecurity portfolio website** that a student can customize and deploy in under 30 minutes with zero coding experience.

## TECH STACK (STRICT)
- HTML5 (semantic tags)
- CSS3 (no preprocessors)
- Vanilla JavaScript (no frameworks, no libraries, no jQuery)
- Must work by opening index.html directly in a browser — no build step required
- Must be deployable via Netlify drag-and-drop

---

## STEP 1 — COLLECT MY INFORMATION

Before generating any code, ask me the following questions one by one (or I can answer all at once):

1. **Full Name** — e.g., "Arjun Mehta"
2. **Role / Title** — e.g., "Cybersecurity Student | SOC Analyst Intern"
3. **Short Tagline** (1 line) — e.g., "Defending networks. Breaking barriers."
4. **About Me** (2–4 sentences) — Background, goals, what excites you in cybersecurity
5. **Areas of Interest** (pick 2–4) — SOC, VAPT, Digital Forensics, Network Security, Malware Analysis, Cloud Security, Threat Intelligence, ICS/SCADA Security
6. **Technical Skills** (list all that apply):
   - Linux, Networking, SIEM, Vulnerability Assessment, Incident Response, Digital Forensics, Packet Analysis, Scripting (Python/Bash), Log Analysis
7. **Tools You Know** (list all that apply):
   - Splunk, Wazuh, Wireshark, Nmap, Metasploit, Burp Suite, Nessus, Volatility, Autopsy, Snort, TheHive, ELK Stack
8. **Projects** (list at least 3, up to 8) — For each project provide:
   - Title
   - 1–2 sentence description
   - Tools/skills used
   - (Optional) GitHub link
9. **Certifications** (list names) — e.g., Google Cybersecurity Certificate, CompTIA Security+, TryHackMe Badges
10. **Contact Links**:
    - Email address
    - LinkedIn URL
    - GitHub URL
    - (Optional) Twitter/X, blog, TryHackMe profile

If I say **"use placeholders"**, skip the questions and generate the site with realistic placeholder content that I can easily find-and-replace later. Mark every placeholder with the comment `<!-- REPLACE -->` in HTML so I can search for it.

---

## STEP 2 — GENERATE THE FULL WEBSITE

### Folder Structure (exact)
```

```
portfolio/
├── index.html
├── css/
│   └── style.css
├── js/
```

```
│   └── main.js
├── assets/
│   ├── images/
│   │   └── profile-placeholder.svg    ← students replace with their photo
│   ├── certificates/
│   │   └── .gitkeep
│   └── resume/
│       └── .gitkeep
└── README.md
```

Mandatory Sections in index.html (in this order)

#	Section	Key Elements
1	**Navigation**	Sticky top navbar, smooth-scroll links to each section, hamburger menu on mobile
2	**Hero**	Name, role, tagline, profile photo (circular), "Download Resume" button, subtle animated background (CSS-only, e.g., gradient shift or particle dots via CSS)
3	**About Me**	Bio paragraph, interest tags/badges (styled pills), career goal statement
4	**Skills**	Two groups: "Technical Skills" and "Tools & Technologies". Display as styled cards with icons (use Unicode/emoji or simple SVG icons — no external icon libraries). Each skill shows a proficiency indicator (progress bar or level dots)
5	**Projects**	Card grid (2–3 columns on desktop, 1 on mobile). Each card: title, description, skill tags, "View Details" button that opens a **modal popup** with full details. Include a close button and click-outside-to-close
6	**Certifications**	Responsive grid of certificate cards. Each card: cert name, issuing organization, date. Optional: clickable to view certificate image from `assets/certificates/`
7	**Resume**	Centered section with a prominent "Download Resume" button linking to `assets/resume/resume.pdf`
8	**Contact**	Contact form (Name, Email, Message) using [Formsubmit.co](https://formsubmit.co) as the action endpoint (with a placeholder email). Below the form: email, LinkedIn, GitHub as icon links
9	**Footer**	"© 2025 [Name]. All rights reserved." with social links

Design Requirements

- **Theme**: Dark background (#0a0a0f or similar), with **neon accent color** — default to cyan/electric blue (#00f0ff). Easy to change via CSS custom properties at the top of style.css
- **CSS Custom Properties** (must be defined in `:root`):
```css
  :root {
    --bg-primary: #0a0a0f;
    --bg-secondary: #12121a;
    --bg-card: #1a1a2e;
    --accent: #00f0ff;
    --accent-glow: rgba(0, 240, 255, 0.3);
    --text-primary: #e0e0e0;
    --text-secondary: #a0a0b0;
    --font-main: 'Segoe UI', system-ui, -apple-system, sans-serif;
    --font-mono: 'Fira Code', 'Consolas', monospace;
  }
```
- **Responsive**: Mobile-first. Breakpoints at 768px and 1024px
- **Animations**: Smooth scroll, hover scale on cards (transform: scale(1.03)), subtle glow on accent elements, fade-in on scroll (Intersection Observer)
- **Typography**: Clean, modern, good contrast (WCAG AA minimum)
- **No horizontal scroll** at any viewport width

JavaScript Requirements (main.js)

Implement these features:
1. **Mobile hamburger menu** — toggle nav visibility, close on link click
2. **Smooth scrolling** — for all anchor links

```
3. **Active nav highlighting** — highlight current section in navbar on scroll
4. **Scroll animations** — fade-in elements as they enter viewport (Intersection Observer API)
5. **Project modal** — open/close modal with project details, close on overlay click and Escape key
6. **Navbar background change** — transparent at top, solid on scroll
7. **Back to top button** — appears after scrolling down 300px

All JS must be:
- Well-commented (explain what each function does)
- Use `addEventListener` (no inline onclick)
- Use `const` and `let` (no `var`)
- Work without errors in Chrome, Firefox, Safari, Edge

---

## STEP 3 — GENERATE README.md

The README.md must include:

### 1. Project Overview
Brief description of what this portfolio is.

### 2. Quick Start (3 Steps)
1. Download/clone the folder
2. Open `index.html` in a browser — it works immediately
3. Customize your content (see below)

### 3. How to Customize (step-by-step for beginners)

| What to Change | Where to Edit | What to Look For |
|---|---|---|
| Your name | `index.html` | Search for `<!-- REPLACE -->` comments |
| Profile photo | Replace `assets/images/profile-placeholder.svg` with your `profile.jpg` (update the `src` in index.html) |
| About me text | `index.html` → About section |
| Skills | `index.html` → Skills section (add/remove cards) |
| Projects | `index.html` → Projects section (duplicate a card and edit) |
| Certificates | Add images to `assets/certificates/`, add new card in HTML |
| Resume | Add your PDF to `assets/resume/resume.pdf` |
| Accent color | `css/style.css` → Change `--accent` in `:root` |
| Contact form email | `index.html` → Change the Formsubmit action URL to your email |
| Social links | `index.html` → Footer and Contact section |

### 4. How to Deploy on Netlify (with screenshots description)
1. Go to [netlify.com](https://netlify.com) and sign up (free)
2. From dashboard, click **"Add new site" → "Deploy manually"**
3. Drag and drop your entire `portfolio/` folder
4. Your site is live! Netlify gives you a URL like `https://random-name.netlify.app`
5. (Optional) Go to **Site settings → Domain management** to set a custom domain

### 5. How to Deploy on GitHub Pages (alternative)
1. Create a GitHub repository
2. Upload all files
3. Go to Settings → Pages → Select main branch
4. Site is live at `https://yourusername.github.io/repository-name`

### 6. Tips for Students
- **Resume tip**: Use strong action verbs — Built, Investigated, Analyzed, Configured, Deployed, Secured, Monitored, Documented
- **Photo tip**: Use a professional headshot with a neutral background. Crop to square.
- **Project tip**: Link to GitHub repos. Even lab exercises count as projects — frame them professionally.
- **Keep it updated**: Add new certs, projects, and skills as you learn.

---

## OUTPUT FORMAT
```

```
Provide the **complete contents** of each file in this exact order:

1. **Folder structure** (tree view)
2. **index.html** — full file, no truncation
3. **css/style.css** — full file, no truncation
4. **js/main.js** — full file, no truncation
5. **README.md** — full file

Do NOT:
- Skip any section
- Use placeholder comments like "add more here"
- Truncate code with "..." or "rest of code"
- Use any external CDN, library, or framework
- Use inline styles (all styling in style.css)
- Use inline JS (all scripting in main.js)

DO:
- Write clean, well-commented code
- Make every placeholder searchable with `<!-- REPLACE -->`
- Ensure the site works perfectly when opened locally
- Test-ready: no console errors, no broken links

**Generate the complete website now. Use placeholders since I will customize later.**
```
